## **Europallets and CP Pallets are Different**

**Suppliers and users often have many questions about the difference between European Chemical Pallets (CP's) and Europallets.**

**CP's and Europallets are two distinctly different "families" of pallets widely used in Europe.**

**Europallets** are the 800mm x 1200mm standardized pallets introduced by the European railroads after World War II. This is the only pallet correctly identified as a "Europallet." Produced by licensed suppliers, officially approved Europallets bear the trademarked logo. There are no licensed Europallet suppliers in the United States today.

**Chemical Pallets** are a family of nine different pallets that were originally designed for the European chemical industry. Administered through the Association of Plastics Manufacturers in Europe (APME), Chemical Pallets are referred to and marketed as "CP" pallets. Registered suppliers including some in the U.S produce them.

**CP's have nine separate designs with the following footprints:**

- **1000mm x 1200mm (CP-1)**
- **800mm x 1200mm (CP-2) (not to be confused with the Europallet)**
- **1140mm x 1140mm (CP-3, CP-8, CP-9)**
- **1100mm x 1300mm (CP-4)**
- **760mm x 1140mm (CP-5)**
- **1200mm x 1000mm (CP-6)**
- **1300mm x 1100mm (CP-7)**
